Unauthenticated GET Open Redirect Report

BOT: [hackbot](#) posted an internal comment.

 Aug 15th (3 mins ago)

Hey there! I am [Hackbot](#), I help find possible duplicates and related reports. Here are my top suggestions:

- (100%) Report [#260423](#) by [ddworken_sfdc](#) (new): Unauthenticated GET Open Redirect Report (Aug 2017 - 17 minutes)
- (100%) Report [#260163](#) by [ddworken_sfdc](#) (new): Unauthenticated GET Open Redirect Report (Aug 2017 - about 18 hours)
- (100%) Report [#260167](#) by [ddworken_sfdc](#) (new): Unauthenticated GET Open Redirect Report (Aug 2017 - about 18 hours)
- (100%) Report [#260107](#) by [ddworken_sfdc](#) (new): Unauthenticated GET Open Redirect Report (Aug 2017 - about 20 hours)
- (100%) Report [#260427](#) by [ddworken_sfdc](#) (new): Unauthenticated GET Open Redirect Report (Aug 2017 - 9 minutes)
- (89%) Report [#240866](#) by [ddworken_sfdc](#) (new): Unauthenticated open redirect report (Jun 2017 - about 2 months)
- (89%) Report [#240880](#) by [ddworken_sfdc](#) (new): Unauthenticated open redirect report (Jun 2017 - about 2 months)
- (89%) Report [#240864](#) by [ddworken_sfdc](#) (new): Unauthenticated open redirect report (Jun 2017 - about 2 months)
- (89%) Report [#240884](#) by [ddworken_sfdc](#) (triaged): Unauthenticated open redirect report (Jun 2017 - about 2 months)
- (89%) Report [#240881](#) by [ddworken_sfdc](#) (new): Unauthenticated open redirect report (Jun 2017 - about 2 months)

We have detected that this report is about an Open Redirect vulnerability.

To triage this bug quicker, this bot can automatically verify vulnerabilities.

Try either:

- Posting a URL that will redirect to a domain containing `"VRRWBQNK"`
- Use the JSON structure below to change the method and/or add cookies

Examples:

Option 1: Unauthenticated GET

If it can be exploited without authentication via simply loading a URL, respond with a link that when visited will redirect to a domain containing `"VRRWBQNK"`. The link should either be specified as a markdown link (`[text](https://example.com)`) or inside a code

block(`https://example.com`).

Option 2: Authenticated GET

If doing so requires authentication, then please copy and paste the below into JSON a code block and fill in the blanks:

```
{
  "URL": "<Fill in the URL here>",
  "cookies": {
    "CookieOneName": "CookieOneValue",
    "CookieTwoName": "CookieTwoValue",
    "CookieThreeName": "CookieThreeValue"
  },
  "type": "get"
}
```

Option 3: Authenticated POST

If the exploit requires authentication and is done via POST, then please copy and paste the below into a code block and fill in the blanks:

```
{
  "URL": "<Fill in the URL here>",
  "cookies": {
    "CookieOneName": "CookieOneValue",
    "CookieTwoName": "CookieTwoValue",
    "CookieThreeName": "CookieThreeValue"
  },
  "type": "post",
  "data": {
    "ArgumentOneName": "ArgumentOneValue",
    "ArgumentTwoName": "ArgumentTwoValue",
    "ArgumentThreeName": "ArgumentThreeValue"
  }
}
```

If this is not possible, there is no need to reply and a human will verify your report as soon as possible.
